MEMORANDUM FOR: Chief, Ballistic Missiles and Space Division, OSI

ATTENTION: [REDACTED]

THROUGH: Chief, Requirements Branch, Reconnaissance Group, OGS

FROM: Chief, Photo Intelligence Division, CIA

SUBJECT: Possible Missile Associated Equipment at Okolnaya Guba, USSR

REFERENCES: (a) Requirement C-SI-4-81,994
(b) CIA/PID Project C 1768-64
(c) [REDACTED] 25X1A
(d) [REDACTED]
(e) U. S. Navy Technical Report 64-23, 11 June 1964

1. This memorandum is in response to your requirement dated 6 November 1964 which requests an evaluation of the canvas covered possible missile associated equipment at Okolnaya Guba, USSR. Measurements included in this memorandum have been made by CIA/PID analysts using known equipment in the area to develop scale factors. These are considered to be accurate within plus or minus 15 percent. 25X1D

2. Photography of [REDACTED] (Reference c) revealed an unusual piece of equipment on a quay at Okolnaya Guba. Analysis of this photography indicated that this piece of equipment was approximately 75 feet in length. Later photography of [REDACTED] (Reference d) revealed at least one, and probably two, canvas covered units side by side on the quay, each approximately 75 feet in length and [REDACTED] feet in width. Even assuming a prime mover to be in place under the canvas, this unit would be much longer than necessary to transport the SS-N-4 missile. No known Soviet surface-to-air or tactical missile system has had equipment of this type identified with it to date. Size alone indicates that, if missile associated, it may be related to surface-to-surface missiles although again there are no known pieces of equipment comparable in size and configuration. 25X1A

3. The photo analyst on this project is [REDACTED] who may be contacted on extension 2421 should you have any further questions concerning this project.

4. This project is considered to be complete.
